

Today's individual software rising costs and increasing hardware requirements are common. If your individual day-to-day organizer is not up to par, you face with dizzying levels of complexity, duplication of effort, and in the worse cases, poor quality of results.

WARNING SIGNS THAT YOUR SOFTWARE IS WASTING YOUR TIME AND MONEY

So why so many individual software do falls short of these goals?

In case after case, implementations miss the mark, and instead of delivering promised cost reductions, performance improvements, software creates complexity, duplication of effort and poor quality.

The Warning Signs

Check these ten warning signs to see if your software is not what you need.

1. Your system can't integrate mission-critical data.

Your data is in multiple formats and locations. There is no centralized backup and exchange point. Worse yet, quality management is not designed for your daily flow.

2. Changes and upgrades to the system are costly and time-consuming.

The software vendor(s) provides releases every 12-24 months and rarely provides the new features you need on a timely basis. Those upgrades are available for a maximum one year and rarely free of charge. No upgrade planning given to an end user in any form.

3. Your disaster recovery not in place.

If your PC(s) is burned, you would have to buy new equipment, configure it and then reload your data from nothing because you had no recovery plan.

4. Beefy PCs, "Fat Clients" and Unsecured ActiveX are needed to get things done.

Sure PCs are getting cheaper, but running less memory and disk is always less expensive. Their benchmarks kill your CPU and memory and create barrier standing between you and your goals.

5. Maintenance fees are high.

With rising software maintenance fees, you're not in control of your computing expenditures. Some of the biggest vendors consistently raise maintenance fees, which increases your total cost of ownership over time.

6. You can't access the data easily if you are traveling.

It's obvious that business doesn't stop when you are traveling. Smart phones help you stay in touch, but it is tough to really do much from such a tiny device,

7. Security is not prioritized.

We can assure that most of the software packs don't protect your privacy and your data.

8. Your family, friends or small business partners can't easily interact with each other.

Can they quickly and easily get the information they need? Can they easily be connected and share files, albums and videos at the same time?

9. Time to learn the system.

Many software packs are difficult to learn and users are easily frustrated when they are instructed to 'Press F1 to inquire' 'or Press Enter to accept'.

10. Set of major top usage features.

Most of social networking sites, portals and software packs are not having user mission critical apps compiled as one.

The Next Step

Chances are, some or all of the issues described above ring true for your business. So what's your next step? Fortunately, a new breed of Software as a Service or SaaS EKONNEKT'S WCS resolves these challenges so you can thrive by doing what they do best and not writing and maintaining software.

WCS is SaaS technology offering robust functionalities without the need for expensive servers, operating systems, database software, backup equipment, and the information technology specialists to manage all of that. Self-hosted EKONNEKT'S WCS is always up to date, and available to customers via a monthly subscription fee [free for individual use *]. With no upfront investments EKONNEKT'S WCS integrated universal system can help drive out costs and improve quality in your day-to-day organization.

EKONNEKT'S WCS is organized into multiple modules that can be implemented individually or as an one solution.

The Difference

EKONNEKT'S WCS is mixed-tier software: PC installed and online solution at the same time. It is accessible by authorized users through the Internet with a standard web browser or locally via Windows client. No servers, software, databases, backups, or other infrastructure are required. The fact that it is service based and requires no infrastructure to implement makes it ideal for managing multiple projects, and for linking people, small business owners, and family members into a centralized database of real-time information no matter where they are around the world.

The Bottom Line

The bottom line is that instead of a multiple applications slowly killing your operation, you can thrive with a new breed of EKONNEKT'S WCS delivered as a SaaS solution. EKONNEKT'S WCS creates a single, unified management system. It controls and streamlines your daily tasks. EKONNEKT'S WCS helps you to increase productivity, improve quality and reduce cost.

Ekonnekt Work Collaboration System is a critical tool for daily errands.
